Nation's First Public-Safety Broadband Network Chooses Nexus iSR

ROCHESTER, NY: Avalon Technology and Nexus iSR, LLC are pleased to report the integration of the Nexus Hawk™ into the Regional Wireless Broadband Network (RWBN) in Washington DC. The RWBN is the nation's first Public Safety 700MHz EVDO high-speed network in the United States. The RWBN is a joint effort by local governments to provide secure, high-speed wireless connectivity to first responders around the Washington DC area over a privately built network.

Nexus iSR's product allows fire and police vehicles to remotely access the private network while in the field with the added ability to access the public cellular network. In the case of an emergency, fire and police vehicles throughout the region can communicate with each other and their command centers over the proprietary network. "With our product, proprietary network cards, as well as commercial network cards can operate on the same device", said Eric Sargent, President of Nexus iSR. "This enables officers to roam in and out of the public and private networks seamlessly when needed." Because the Nexus product also has GPS capability, central command locations can monitor the location of all of the vehicles in the region, regardless of
